25 September 2024

# Nature restoration in the Marine Conservation Fund

- Concrete project in Taarbæk Rev and screening for a new project in Storebælt
- Mapping of potential areas for restoration
- Catalogue for marine restoration
- New knowledge on nature enhancement and mitigating technologies
- More to come

# Data in the Marine Conservation Fund

- Digital infrastructure:
  - Data is scattered and often lost
  - One data platform and infrastructure to support ecosystem-based management
  - Collect all existing and future data on OWF and marine nature in one database
- Tool for assessment of the cumulative effects
  - Should take all pressures into account
  - Need for more data, but sufficient data to get started
